Banking Profile

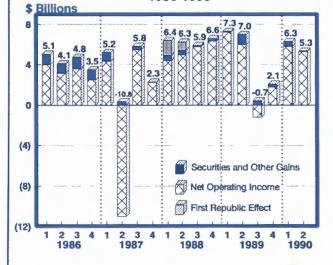

Second Quarter, 1990

COMMERCIAL BANKING PERFORMANCE - SECOND QUARTER, 1990

- Banks Earn \$5.3 Billion In Second Quarter
- Asset Quality Problems Deepen At Eastern Banks
- Southwestern Banks Report Second Consecutive Quarterly Profit
- Banks in Far West Report Strong Profitability And Asset Growth

Sluggish asset growth and deepening credit quality problems held down bank profits in the second quarter of 1990. Insured commercial banks reported profits of \$5.3 billion, 24 percent below the \$7 billion earned in last year's record second quarter. For the first six months of this year, commercial bank earnings totalled \$11.6 billion, down 18.5 percent from the first half of 1989. The main reason for the year-to-year decline continues to be provisioning for future credit losses, which was \$2 billion higher in the second quarter than a year earlier. Net loan losses, at \$8.6 billion in the second quarter, were 66 percent higher than a year earlier. As a result, reserve levels fell by more than \$2.1 billion despite the increase in loan-loss provisions. Most of the reduction in reserves resulted from write-downs of loans to developing countries.

Chart A - Quarterly Net Income of FDIC-Insured Banks
1986-1990

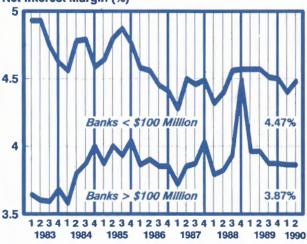

The return on assets for commercial banks was 0.64 percent in the second quarter, compared to 0.88 percent in the second quarter of 1989. Unlike the year-ago quarter, smaller banks enjoyed higher

profitability than their larger counterparts. Banks with assets of less than \$1 billion had more favorable asset-quality indicators, while larger institutions saw the credit quality of their loan portfolios deteriorate. Despite a combination of higher levels of troubled assets and decreased earnings, shareholder dividends increased 4.4 percent from a year earlier, consuming nearly 70 percent of the banking industry's net income in the second quarter.

Chart B - Quarterly Net Interest Margins, 1983-1990

Net Interest Margin (%)

Net interest margins improved from the previous quarter at smaller banks, and were unchanged at larger banks. Net interest income was slightly above the level of a year earlier, but interest-earning assets grew at a higher rate, so average margins were smaller than a year ago at both large and small institutions. Average funding costs were lower than a year ago, but asset yields fell even more. Noninterest expense growth remained high at large banks in the Northeast, reflecting the increased burden of higher levels of troubled assets.

FDIC Division of Research & Statistics Don Inscoe (202) 898-3940

Ross Waldrop (202) 898-3951 Noninterest income growth was flat. Overall, the increase in noninterest expense levels more than offset the modest year-to-year rise in net interest income.

Increasing credit-quality problems were evident at banks in the eastern half of the country. Noncurrent loans and leases and foreclosed real estate were higher than a year ago in the three eastern regions, but were lower in the three western regions. The highest percentage increase was registered by banks in the Southeast Region, where noncurrent loans and leases and foreclosed real estate were 51 percent above the level at mid-year 1989. At Northeast Region banks, troubled assets were 37 percent higher than a year earlier. Banks in these two regions also experienced the largest increases in net loan losses.

Almost all of the banking industry's \$2 billion increase in loan-loss provisioning was registered by banks in the Northeast Region, where provisions were up by \$1.9 billion. This was more than twice the amount set aside for future losses by Northeast banks in the second quarter of last year. Noncurrent loans and leases plus foreclosed real estate increased by \$3.4 billion during the quarter, to more than \$11.7 billion above the level of a year earlier. Net charge-offs of \$5.1 billion were more than twice as high as in the second quarter of 1989. Loss reserves declined by \$2 billion during the quarter, but were still \$5.3 billion higher than a year ago. The credit quality problems of banks in the Northeast were not limited to real estate assets. Commercial credits, loans to developing countries and consumer loans all showed weakness, reflecting the increasing difficulties facing many large regional and money-center institutions.

Banks in the Southwest Region reported positive net income for the second consecutive quarter, the

first time since 1985 that the Region's banks have back-to-back profitable quarters. charge-offs at banks in the Southwest Region were 13.8 percent lower than in the same period of 1989, and noncurrent loans and leases and foreclosed real estate at mid-year were down almost \$4.4 billion from a year ago.

Banks in the West Region continue to register above-average asset growth, led by expansion in residential real estate lending. At mid-year, real estate loans held by the Region's banks were 23.5 percent above the level of a year earlier; during the second quarter, real estate loans grew at a 29 percent annual rate. Despite ongoing difficulties in Arizona, Western banks had the strongest asset growth and highest profitability of banks in any region during the second quarter. At the same time, asset quality indicators remain favorable.

Ninety-nine commercial banks failed or required assistance to avert failure in the first half of 1990, compared to 101 failures in the first half of 1989. The number of banks on the FDIC's "Problem List" at the end of June was 1.014, the lowest level since 1985. The pace of bank failures is not expected to change significantly in the second half of this year.

The real estate problems of the Northeast have spread to the mid-Atlantic states, and signs of real estate weakness have appeared in several Southeastern states. For the remainder of this year, domestic asset quality problems will continue to hurt earnings at banks in the East. If the New England economy weakens further, losses in real estate assets and commercial loans can be expected to increase. Banks that are weakly capitalized can be expected to seek to boost their net worth ratios through sales of assets, loan securitization, and retained earnings.

NOTES TO USERS

COMPUTATION METHODOLOGY FOR PERFORMANCE AND CONDITION RATIOS

All income figures used in calculating performance ratios represent amounts for that period, annualized (multiplied by the number of periods in a year).

All asset and liability figures used in calculating performance ratios represent average amounts for the period (beginning-of-period amount plus end-of-period amount plus any periods in between, divided by the total number of periods).

All asset and liability figures used in calculating the condition ratios represent amounts as of the end of the quarter.

DEFINITIONS

"Problem" Banks—Federal regulators assign to each financial institution a uniform composite rating, based upon an evaluation of financial and operational criteria. The rating is based on a scale of 1 to 5 in ascending order of supervisory concern. "Problem" banks are those institutions with financial, operational or managerial weaknesses that threaten their continued financial viability. Depending upon the degree of risk and supervisory concern, they are rated either "4" or "5".

Earning Assets—all loans and other investments that earn interest, dividend or fee income.

Yield on Earning Assets—total interest, dividend and fee income earned on loans and investments as a percentage of average earning assets.

Cost of Funding Earning Assets - total interest expense paid on deposits and other borrowed money as a percentage of average earning assets.

Net Interest Margin—the difference between the yield on earning assets and the cost of funding them, i.e., the profit margin a bank earns on its loans and investments.

Net Noninterest Expense—total noninterest expense, excluding the expense of providing for loan losses, less total noninterest income. A measure of banks' overhead costs.

Net Operating Income—income after taxes and before gains (or losses) from securities transactions and from nonrecurring items. The profit earned on banks' regular banking business.

Net Operating Cash Flow—pre-tax net operating income before the provision for loan and lease losses; a measurement of banks' cash flow, net of interest and overhead expenses, from regular operations. Previously referred to as "adjusted net operating income".

Return on Assets—net income (including securities transactions and nonrecurring items) as a percentage of average total assets. The basic yardstick of bank profitability. Return on Equity—net income as a percentage of average total equity capital.

Loan Commitments and Letters of Credit—includes unused credit card commitments and overdraft plans, reflecting Call report revisions effective March 31, 1990.

Net Charge-offs—total loans and leases charged off (removed from balance sheet because of uncollectibility) during the quarter, less amounts recovered on loans and leases previously charged off.

Noncurrent Loans & Leases-the sum of loans past-due 90 days or more and loans in nonaccrual status.

Primary Capital—total equity capital plus the allowance for loan and lease losses plus minority interests in consolidated subsidiaries plus qualifying mandatory convertible debt (cannot exceed 20 percent of total primary capital), less intangible assets except purchased mortgage servicing rights.

Net Loans and Leases—total loans and leases less unearned income and the allowance for loan and lease losses.

Temporary Investments—the sum of interest-bearing balances due from depository institutions, federal funds sold and resold, trading-account assets and investment securities with remaining maturities of one year or less.

Volatile Liabilities—the sum of large denomination time deposits, foreign office deposits, federal funds purchased, and other borrowed money.

Requests for copies of and subscriptions to the FDIC Quarterly Banking Profile should be made through the FDIC's Office of Corporate Communications, 550 17th Street N.W., Washington, D.C. 20429; telephone (202) 898-6996.
