William Taylor, Chairman

Fourth Quarter, 1991

# **COMMERCIAL BANKING PERFORMANCE - FOURTH QUARTER, 1991**

- Commercial Banks Earn \$18.6 Billion in 1991
- Fourth-Quarter Earnings Total \$3.68 Billion

The FDIC

<u>uarterlv</u>

- Loan Portfolios Shrink for Fourth Consecutive Quarter
- Banks Charge-Off a Record \$9.4 Billion in Fourth Quarter
- Asset-Quality Problems Recede in Northeast

Insured commercial banks earned \$18.6 billion in 1991, up from \$16.1 billion in 1990. The improvement in net income was a result of higher net interest income and increased gains from sales of investment securities. Net income before securities and extraordinary gains was actually \$184 million lower in 1991 than in the previous year. The average return on assets for the full year was 0.56 percent, and the average return on equity was 8.32 percent. Over 46 percent of the banks, representing 37 percent of banking industry assets, reported returns on assets greater than one percent in 1991. In contrast, 10.8 percent of the banks, representing 21 percent of industry assets, reported net losses for the year. In recent years, the high-profitability segment of the industry has grown, both in the share of banks and of banking industry assets. The number of unprofitable banks has fallen; however, the share of industry assets held by these institutions has grown.

In the fourth quarter, banks earned \$3.68 billion, an increase of \$2.8 billion from the fourth quarter of 1990. The average return on assets was 0.43 percent, while the average return on equity was 6.39 percent. All asset-size groups of banks posted improved returns on assets and equity compared to the fourth quarter of 1990. Higher gains from sales of investment securities, lower provisions for future loan losses and increased net interest income all contributed to the year-to-year improvement in quarterly earnings. Net income totals for both the fourth quarter and full year were the highest since the record amounts earned by commercial banks in 1988.

rofile

Banks realized \$2.96 billion in gains from sales of investment securities in 1991, accounting for almost 16 percent of commercial bank earnings. These gains totaled \$1.4 billion in the fourth quarter alone, almost 40 percent of banks' quarterly net income. Provisions for future loan losses in the fourth guarter were \$1.6 billion below the amount set aside a year earlier, while net charge-offs were \$596 million higher than in the fourth guarter of 1990. The largest reductions in loss provisions occurred in the Northeast Region, where provisions were \$2 billion lower than in the fourth guarter of 1990. The improvements in the Northeast and elsewhere offset an \$875-million increase in loan-loss provisioning by banks in the West Region. For the full year, loan-loss provisions totaled \$33.9 billion. This amount was second only to the \$37.5 billion in loan-loss provisions taken in 1987, when large banks added \$20.7 billion to their reserves for future losses on loans to developing countries.

FDIC Division of Research & Statistics

Don Inscoe (202) 898-3940 Ross Waldrop (202) 898-3951 Banks' funding costs continued to decline more rapidly than their asset yields in the fourth quarter, as net interest margins improved to their highest levels since the fourth quarter of 1988. Net interest income was \$2.1 billion higher than in the fourth quarter of 1990. Noninterest revenues were \$1.1 billion above the level of a year ago, but noninterest expenses were \$2.5 billion higher. About one-quarter of the increase in noninterest expenses represented costs associated with higher deposit insurance premiums.

#### Chart B - Quarterly Net Interest Margins of FDIC-Insured Banks

Loans and leases outstanding at commercial banks shrank throughout the year, while overall asset growth averaged only 1.2 percent. This was the lowest asset growth rate since 1948. when banking industry assets declined by 0.4 percent. The banking industry's loan portfolio fell by \$58.8 billion, or 2.8 percent, during 1991. Total loans and leases declined for the fourth consecutive quarter, falling by \$9.7 billion in the final quarter of the year. Most of the shrinkage was in commercial and industrial loans, which declined by \$56.1 billion in 1991. Ten years ago, these loans accounted for 40 percent of all loans at commercial banks; they now represent only 27 percent of all loans. Total assets of commercial banks declined by \$3 billion in the fourth guarter. U.S. Treasury securities and mortgage-backed securities, which increased by \$26.8 billion in the quarter, were the only asset categories that grew significantly.

Equity capital increased by \$1.8 billion in the fourth quarter to \$232.2 billion, or 6.77 percent of total assets. For the full year, equity increased by \$13.5 billion. Retained earnings contributed \$4.3 billion to equity in 1991, as banks paid dividends of \$14.3 billion out of \$18.6 billion in earnings. Total loan-loss reserves declined by \$561 million in 1991, but at year-end, commercial banks held 72 cents in reserves for every dollar of noncurrent loans, up from 71 cents at the end of 1990.

Commercial banks charged-off \$9.4 billion in the fourth quarter, the highest quarterly amount ever charged-off. Noncurrent loans and leases fell by \$4.36 billion in the fourth quarter, while other real estate owned rose by \$1.5 billion. Troubled assets declined as a proportion of total assets for the second straight quarter, but remained higher than in any period prior to 1991.

# Chart C - Noncurrent Loan Rates at % of Loans Year-end, 1982-1991

Includes loans to foreign governments, depository institutions and lease receivables.

Banks in the West Region were the only group that had increases in their proportion of troubled assets and in their loan-loss provisioning in the fourth quarter. Noncurrent loans at West Region banks increased by \$262 million during the quarter, and other real estate owned rose by \$549 million. Net charge-offs of loans and leases were \$1.68 billion in the fourth quarter, the highest quarterly amount ever for West Region banks.

#### Chart D -Annual Net Loan Charge-off Rates, 1982 - 1991

<sup>\*</sup>Includes loans to foreign governments, depository institutions and lease receivables.

Many of the largest commercial banks continue to experience earnings problems. High loan-loss provisioning and increased overhead costs (possibly related to restructurings) combined to hold down large-bank earnings. Banks with more than \$10 billion in assets enjoyed the greatest improvement in net interest margins in the fourth quarter, but they would have registered almost no net income absent gains from sales of investment securities. More than half of the 49 banks in this size group had lower earnings than a year ago, and one out of every four reported a net loss in the fourth quarter.

The number of commercial banks fell below 12,000 in 1991, as the industry shrank by 420 institutions. There were 448 mergers during the year, while 108 banks failed or received assistance to avert failure. One hundred and six new bank charters were issued in 1991, the lowest total since 1968. The number of full-time equivalent employees at commercial banks fell to 1.49 million in the fourth quarter, the lowest level since 1981. During 1991, the number of employees declined by 31,000.

The combination of lower levels of noncurrent loans, increased equity capital, and stable reserves could lead to lower loan-loss provisioning and improved earnings at commercial banks in 1992. Overhead expense control should improve, but net interest margins may narrow as average asset yields decline. It is unlikely that gains from sales of investment securities will contribute as much to earnings in 1992 as they did in 1991.

# SAVINGS BANK PERFORMANCE - FOURTH QUARTER 1991

- BIF-Insured Savings Banks Lose \$1.2 Billion in 1991
- FDIC Resolution of Failed Institutions Contributes To Lower Losses Compared With Previous Year
- Fourth-Quarter Losses Total \$423 Million
- Nine Institutions Fail During Quarter, Nineteen Fail During Year

Savings banks insured by the Bank Insurance Fund (BIF) lost \$423 million in the fourth quarter of 1991, a substantial improvement over the \$1.4 billion net loss reported in the final quarter of 1990. Full-year 1991 losses of \$1.2 billion also represented an improvement from the \$2.6 billion net loss in 1990. FDIC resolutions of failing institutions contributed significantly to these improvements by removing the worst performers.

Noncurrent loans – those either past due at least 90 days or in nonaccrual status – totaled \$9.1 billion at the end of the fourth quarter, \$806 million lower than one year ago. Other real estate owned – primarily repossessed properties – continued to climb, increasing \$1.4 billion during the year.

The fourth-quarter reduction of \$283 million in noncurrent loans was attributable to the failure of nine New England savings banks during the quarter.<sup>1</sup> Together, these institutions reported \$453 million in noncurrent loans and \$578 million in other real estate owned on their final Call report. After adjusting for the removal of failed institutions, noncurrent loans increased by \$134 million at savings banks in the New England states in the fourth quarter and other real estate owned increased \$541 million. Noncurrent loans held by savings banks in the Northeast outside of New England increased by \$33 million (0.6 percent) during the quarter while other real estate owned in these institutions increased by \$301 million (15.5 percent).

Reserve coverage of noncurrent loans has improved as the amount of such loans in the industry has fallen. At yearend 1991, BIF-insured savings banks held 33 cents in reserve against each dollar of noncurrent loans, up from 30 cents at the end of the third quarter. Year-end reserve coverage stood at 43 cents for BIF-insured savings banks in New England and 26 cents for institutions elsewhere in the Northeast. The industry's aggregate equity capital ratio stood at 6.74 percent of assets at year-end, down slightly from the 6.87 percent at the end of the previous quarter, but up from the 6.62 percent at year-end 1990.

Troubled assets, including other real estate owned, constituted 5.86 percent of total assets, marginally lower than the prior quarter but above the 5.13 percent reported at the end of 1990. Troubled-asset ratios improved during the quarter in the New England institutions while they deteriorated in savings banks headquartered elsewhere in the Northeast. On average, troubled assets comprised 5.65 percent of total assets held by the New England savings banks compared with 6.39 percent in the other Northeast institutions. The industry's net interest margins continued to improve as lower interest rates reduced funding costs faster than asset yields. Aggregate net interest margins have improved in five consecutive quarters, increasing to 3.05 percent of average earning assets as of December 31, 1991. Noninterest expenses declined both during the quarter and for the full year, benefiting from the removal of distressed assets from the system. Higher BIF assessment rates added approximately \$50 million to the industry's fourth quarter 1991 noninterest expense compared with the final quarter of 1990.

The percentage of unprofitable institutions has improved significantly: three of every ten institutions lost money in the most recent fourth quarter, compared with nearly 50 percent the previous fourth quarter. Thirty-four percent of the savings banks in New England are still losing money, compared to twenty percent of those elsewhere in the Northeast. Only one of the 15 savings banks headquartered outside the Northeast lost money in the fourth quarter. BIF-insured savings banks outside the Northeast were profitable as a group, with an average fourth quarter return-on-assets of 1.18 percent.

During 1991, nineteen BIF-insured institutions with \$19.5 billion in assets failed. Deposits of nearly \$16 billion (in 1.9 million deposit accounts) were transferred to other FDIC-insured institutions. FDIC receiverships retained assets with a book value of \$6.7 billion<sup>2</sup> – about 34 percent of the assets in these institutions when they were closed. Losses absorbed by the Bank Insurance Fund were estimated at \$3.4 billion, 17.4 percent of the assets reported by these institutions before they failed.

Eighteen of the nineteen failed savings banks were headquartered in the New England states - seven in Massachusetts, five each in Connecticut and New Hampshire, and one in Maine. The largest savings bank to fail during 1991 (Goldome, Buffalo, New York) held assets with a book value of \$9.1 billion at closure.

Lower funding costs will continue to bolster interest margins and limit losses in the Northeast. The viability of many unprofitable savings banks depends on recovery values of distressed real estate assets. At year-end, noncurrent loans plus other real estate owned equaled 73 percent of the industry's combined capital and loan-loss reserves.

<sup>&</sup>lt;sup>1</sup> Five of these institutions with \$3.3 billion in total assets did not submit their September 30, 1991 Call report before they failed in the fourth quarter of 1991.

<sup>&</sup>lt;sup>2</sup> In some resolution transactions, additional assets of failed institutions can be "put back" to the FDIC.

# Number of Commercial and Savings Banks on FDIC's "Problem List"

Assets of Commercial and Savings Banks on FDIC's "Problem List"

#### NOTES TO USERS: COMPUTATION METHODOLOGY FOR PERFORMANCE AND CONDITION RATIOS

The data on commercial banks and state-chartered savings banks were obtained from Call reports filed with the FDIC and Federal Reserve Board. Data on Federally-chartered savings banks (15 institutions as of December 31, 1991) were obtained from Thrift Financial Reports filed with the Office of Thrift Supervision. Certain adjustments are made to the Thrift Financial Reports to provide closer conformance with Call report disclosure requirements.

All income figures used in calculating performance ratios represent amounts for that period, annualized (multiplied by the number of periods in a year).

All asset and liability figures used in calculating performance ratios represent average amounts for the period (beginning-of-period emount plus end-ofperiod amount plus eny periods in between, divided by the total number of periods).

All asset and liability figures used in calculating the condition ratios represent amounts as of the end of the quarter. Current quarter and year-ago quarter income and expense amounts and performance ratios are adjusted to account for "pooling of interest" mergers beginning with the fourth quarter, 1991 publication.

#### DEFINITIONS

"Problem" Banks - Federal regulators assign to each financial institution a composite rating, based upon an evaluation of financial and operational criteria. The rating is based on a scale of 1 to 5 in ascending order of supervisory concern. "Problem" banks are those institutions with financial, operational, or managerial weaknesses that threaten their continued financial viability. Depending upon the degree of risk and supervisory concern, they are rated either a "4" or "5."

Earning Assets - all loans and other investments that earn interest, dividend or fee income.

Yield on Earning Assets - total interest, dividend and fee income earned on loans and investments as a percentage of average earning assets.

Cost of Funding Earning Assets - total interest expense paid on deposits and other borrowed money as a percentage of average earning assets.

Net Interest Margin - the difference between the yield on earning assets and the cost of funding them, i.e., the profit margin a bank earns on its loans and investments.

Return on Assets - net income (including securities transactions and nonrecurring items) as a percentage of average total assets. The basic yardstick of bank profitability.

Return on Equity-net income as a percentage of average total equity capital.

Loan Commitments and Letters of Credit-includes unused credit card commitments and overdraft plans, reflecting Call report revisions effective March 31, 1990.

Net Charge-offs - total loans and leases charged off (removed from balance sheet because of uncollectibility) during the quarter, less amounts recovered on loans and leases previously charged off.

Noncurrent Loans & Leases - the sum of loans past-due 90 days or more and loans in nonaccrual status.

Other Real Estate Owned - primarily foreclosed property. Direct and indirect investments in real estate ventures are excluded where appropriate. Other noncurrent assets - debt securities and other assets (excluding loans, leases and other real estate owned) that are either past-due at least 90 days

or in nonaccrual status. Due to reporting differences, only defaulted debt securities are included for Federal Savings Banks. Core capital – common equity capital plus noncumulative perpetual preferred stock plus minority interest in consolidated subsidiaries, less goodwill and other ineligible intangible assets. Eligible intangibles (including mortgage servicing rights) are limited to 100 percent of core capital for savings banks, to 50 percent of core capital for state-chartered commercial banks that are not Federal Reserve members, and to 25 percent for National banks.

Net Loans and Leases - total loans and leases less unearned income and the allowance for loans and lease losses.

Temporary Investments - the sum of interest-bearing balances due from depository institutions, federal funds sold and securities purchased under agreements to resell, trading-account assets and investment securities with remaining maturities of one year or less.

Volatile Liabilities -- the sum of large denomination time deposits, foreign office deposits, federal funds purchased, securities sold under agreements to repurchase, and other borrowed money.
