COMMERCIAL BANKING PERFORMANCE — FOURTH QUARTER, 1994

- Commercial Banks Earn \$10.7 Billion In Fourth Quarter
- Full-Year Earnings Of \$44.7 Billion Set New Record
- Loan Growth Continues To Support Strong Industry Performance
- Assets Of Commercial Banks Pass $\$ 4$ Trillion Mark

Commercial banks reported $\$ 10.7$ billion in fourthquarter earnings, lifting their net income for the year to a record $\$ 44.7$ billion. Net interest income was $\$ 1.9$ billion higher in the fourth quarter than a year earlier, while loan-loss provisions were $\$ 1.1$ billion lower. However, these year-to-year improvements were outweighed by a \$1.7-billion increase in overhead expense, a \$1.1-billion decline in after-tax proceeds from securities sales and extraordinary items, and a \$342-million decline in noninterest income. As a result, fourthquarter earnings were $\$ 55$ million lower than a year earlier. The average return on assets (ROA) in the fourth quarter was 1.08 percent, down from 1.18 percent a year ago.

For the full year, industry earnings of $\$ 44.7$ billion were $\$ 1.6$ billion ( 3.7 percent) above 1993's $\$ 43.1$ billion, even though securities sales and extraordinary transactions produced $\$ 4.7$ billion less after taxes than in 1993. Net operating (core) earnings, which exclude these nonrecurring items, were $\$ 6.3$ billion ( 16.2 percent) higher than in 1993. Banks registered \$570 million in losses on securities sales and $\$ 15$ million in extraordinary losses in 1994, compared to $\$ 3.1$ billion in securities gains and $\$ 2.1$ billion in extraordinary gains in 1993. This marks the first year since 1982 that banks have reported a combined net loss on securities and extraordinary transactions. The main sources of earnings improvement in 1994 were higher net interest income (up $\$ 7.3$ billion), and lower loan-loss provisioning (down $\$ 5.9$ billion). The increase in net interest income was attributable to strong growth in interest-bearing assets, especially loans, as net interest margins were slightly lower than in 1993 . The $\$ 10.9$ billion banks set aside in provisions for loan losses in 1994 was the smallest annual total since 1983. Noninterest income grew by only $\$ 1.3$ billion, held down by a $\$ 2.9$-billion decline in trading account and foreignexchange gains and fees.

Slightly more than half (54.4 percent) of the 10,450 commercial banks reporting year-end results registered higher earnings than in 1993. Fewer than one in 25 banks was unprofitable in 1994. For the third consecutive year, almost two-thirds of all commercial banks posted average returns on assets of one percent or greater. Banks paid dividends to shareholders totaling $\$ 28.1$ billion in 1994, an increase of over $\$ 6$ billion ( 27.5 percent) from 1993. Dividend payments were equal to 62.9 percent of banks' net income, the highest payout level since 1991. Retained earnings were $\$ 16.6$ billion, a decline of $\$ 4.4$ billion (21.1 percent) from 1993.

Average net interest margins declined slightly in the fourth quarter, to 4.42 percent from 4.46 percent in the previous quarter and 4.43 percent in the fourth quarter of 1993. Margin strength was evidenced by the smallest and largest banks. Banks with assets of $\$ 1$ billion or less and banks with assets greater than $\$ 10$ billion experienced no decline in their average margins from thirdquarter levels, and had higher margins than a year
ago. Fourth-quarter margins at banks with assets between $\$ 1$ billion and $\$ 10$ billion were lower than in either the third quarter of 1994 or the fourth quarter of 1993. The increase in the share of loans in the industry's total assets helped lift average asset yields, while higher proportions of nondeposit liabilities and foreign-office deposits in banks' funding contributed to the larger increase in average funding costs as short-term interest rates rose.

## Quarterly Net Interest Margins 1990-1994

Commercial bank assets grew by $\$ 87.8$ billion in the fourth quarter, to $\$ 4.01$ trillic ר at year-end. The 8.2-percent asset growth rate registered for full-year 1994 is misleading, however, because new accounting rules changed the reporting of assets in 1994. At the beginning of the year, a change in the accounting treatment of assets in trading accounts (FASB Interpretation \# 39) caused a one-time increase in assets of approximately $\$ 100$ billion. Another accounting change affecting the reporting of banks' securities and equity capital (FASB Statement 115) reduced reported assets by $\$ 11.5$ billion and equity capital by $\$ 7.9$ billion at the end of 1994 (See Notes to Users, p. 21). Without these changes, asset growth in 1994 would have been slightly below 6 percent. In contrast, the reported growth in loans is actual; the 9.7 percent increase in 1994 was the largest annual growth rate since loans grew 14.5 percent in 1984. All major loan categories except loans for real estate construction and development increased in 1994. Credit card loans had the most rapid expansion, increasing by over 21 percent. The largest dollar increases came in real estate loans, which grew by $\$ 74.7$ billion (with 1-4 family residential loans growing by $\$ 53.1$ billion), loans to individuals, which increased by $\$ 68.1$ billion, and commercial and industrial loans, which rose by $\$ 50.5$ billion. The increase in commercial and industrial loans was the largest full-year increase since 1981. In contrast, banks' securities holdings registered their first year-to-year decline since 1985, falling by $\$ 13.6$ billion. Most of the decrease ( $\$ 11.5$ billion, or 84.6 percent) was attributable to mark-to-market adjustments under new accounting rules that took effect in 1994 (FASB Statement 115).

Noncurrent Loan Rates At Year-End 1984-1994

*Includes bans to foreign governments, depository institutions and lease receivables.
Troubled asset levels continued to decline through the end of 1994. Noncurrent loans registered their fifteenth consecutive quarterly decline in the fourth quarter, falling by $\$ 2.7$ billion. This brought the reduction for all of 1994 to $\$ 12.1$ billion ( 28.2 percent). The industry's inventory of other real estate owned (OREO) fell by $\$ 2.3$ billion in the fourth quarter; the full-year net reduction in OREO was $\$ 6.7$ billion. Together, these troubled assets totaled $\$ 40.3$ billion at the end of 1994, almost two-thirds ( 63.0 percent) below the peak level of $\$ 109.5$ billion reached at midyear, 1991. Banks charged-off $\$ 3.1$ billion (net) in the fourth quarter, a decrease of 36.2 percent from the fourth quarter of 1993. Net loan charge-offs for the full year totaled $\$ 11.2$ billion, a 35.9 percent drop from the previous year, and the lowest annual total since banks charged-off \$10.8 billion in 1984. Reserve levels fell for the fourth consecutive year, declining by $\$ 655$ million in 1994. At the same time, the ratio of reserves to noncurrent loans, or "coverage ratio", rose to $\$ 1.69$ in reserves for every dollar of noncurrent loans at year-end, the highest level registered in the thirteen years banks have reported noncurrent loan amounts.

## Annual Net Loan Charge-Off Rates 1984-1994

With troubled assets continuing to recede, with reserve coverage levels at all-time highs, and with more than 98 percent of the industry well-capitalized according to regulatory capital standards, a number of banks sought to convert some of their reserves back into earnings, while some converted equity into dividends. In the fourth quarter, 803 banks reported $\$ 700$ million in negative loan-loss provisions. For the full year, 749 banks reported negative loan-loss provisions totaling $\$ 912$ million. Both groups had above-average coverage ratios of reserves to noncurrent loans. Of the 8,291 banks paying dividends to shareholders in 1994, more than half ( 4,782 banks, or 57.7 percent) reported higher dividend payments than in 1993. There were 905 banks that paid more in dividends than they earned in 1994 (the difference being a net reduction in equity capital). Together, they paid \$11.6 billion in dividends, while posting aggregate earnings of only $\$ 8.3$ billion, so their equity capital was reduced by more than $\$ 3.2$ billion to support dividend payments. These institutions tended to have car ital levels above the industry average.
The number of banks reporting financial results fell by 142 institutions in the fourth quarter, from 10,592 to 10,450. There were 14 new banks chartered, and 160 banks absorbed through mergers or consolidations. No commercial banks failed in the fourth quarter. For all of 1994, the net reduction in commercial banks totaled 508 institutions. There were 50 new charters issued, and 550
banks were absorbed by mergers or consolidations. Eleven banks failed in 1994, the lowest full-year total since 1981. The number and assets of "problem" banks continued to shrink. At year-end, there were 247 banks with combined assets of $\$ 33$ billion on the FDIC's "Problem List", a net reduction of 46 banks and $\$ 3$ billion in assets during the fourth quarter, and a net decline of 179 banks and $\$ 209$ billion in assets since the end of 1993.

Structural Changes Among FDIC-Insured Commercial Banks, 1980-1994

Commercial and Industrial Loan Growth Rates* December 31, 1993 - December 31, 1994

## Commercial Banks Make More Credit Available to Businesses and Consumers

Most of the loan growth has occurred in real estate loans. In the fourth quarter of 1994, home mortgage loans increased by $\$ 18.9$ billion, credit card loans increased by $\$ 17,0$ billion, and commercial and industrial loans increased by $\$ 13.7$ billion.

Quarterly Increase in Unused Loan
Commitments (\$ Billions)

Most of the growth in loan commitments has
occurred in unused credit card commitments. In the fourth quarter of 1994, unused credit card commitments increased $\$ 47.0$ billion, and unused commitments for loans to businesses and consumers increased $\$ 34.1$ billion.

[^0]**Noncurrent loan rates represent the percentage of loans in each category that are past due 90 days or more or that are in nonaccrual status.

FDIC Quarterly Banking Profile
Fourth Quarter 1994

# Savings Institutions Earned \$1.7 Billion In The Fourth Quarter, \$6.4 Billion For The Full Year 

## High Funding Costs And Restructuring Charges Hold Down Earnings

Assets Register First Full-Year Increase Since 1988

Four Institutions Failed In 1994, Two In The Fourth Quarter

Private-sector savings institutions earned $\$ 1.7$ billion in the fourth quarter of 1994, for an annualized return on assets (ROA) of 0.67 percent. Net income was down by $\$ 207$ million from the third quarter ${ }^{1}$ due to lower net interest income (down by $\$ 250$ million) and increased noninterest expense (up by $\$ 248$ million). Provisions for loan losses were $\$ 80$ million higher than in the previous quarter, but were 45 percent lower than in the fourth quarter of 1993, when thrifts set aside $\$ 1$ billion for loan losses. Securities sales produced losses of $\$ 80$ million in the fourth quarter, compared with a $\$ 10$ million gain in the third quarter and a $\$ 400$ million gain in 1993. Although thrifts had $\$ 5$ million in extraordinary losses in the fourth quarter, this represents a dramatic improvement over the third quarter when extraordinary losses were $\$ 265$ million. More than half of all thrifte, 55 percent, had lower earnings in the fourth quarter than a year earlier.

With rising interest rates, net interest margins continued to fall. Net interest margins declined to 3.25 percent in the fourth quarter from 3.35 percent in the previous quarter. The 10 basis point drop in net interest margins was the largest quarterly drop all year. Average asset yields rose 23 basis points this quarter, but were out-paced by a 33 -basis point increase in funding costs. Net interest margins were down in all but the smallest size group and in all regions. The Southwest Region reported a higher margin for the fourth quarter only because the accounting treatment of one large merger transaction ${ }^{2}$
caused average earning assets to be understated. Adjusting for the merger using year-end earning assets (rather than an average for the quarter), causes the region's net interest margin to fall by 18 basis points.

Quarterly Net Interest Margins
1990-1994

Net income for the full year, at $\$ 6.4$ billion, was below the pace set in 1993, when thrifts earned $\$ 6.8$ billion, but net operating income improved by 4.8 percent. Net operating income (which exclude proceeds from securities sales and extraordinary items) increased from $\$ 6.6$ billion in 1993 to $\$ 6.9$ billion in 1994. Provisions for loan losses were down by $\$ 1.9$ billion as asset quality improved, but this improvement was partially offset by a $\$ 1.7$ billion drop in net interest income. Securities sales, which produced a $\$ 400$ million gain in 1993, generated a $\$ 28$ million loss for 1994. Extraordinary losses were up by $\$ 433$ million, as several large institutions took charges to strengthen their balance sheet. Over 93 percent of all savings institutions reported profits for 1994, but one

[^1]of every four large institutions (over $\$ 5$ billion in assets) lost money. Despite the $\$ 431$ million drop in net income, thrifts increased cash dividends by $\$ 272$ million. Earnings retained by the industry fell from $\$ 4.6$ billion in 1993 to $\$ 3.8$ billion during 1994.

Reserves for loan losses fell during 1994, as net charge-offs of $\$ 3.1$ billion exceeded loan-loss provisions of $\$ 2.4$ billion, but noncurrent loans declined more rapidly. Reserves declined $\$ 386$ million during the fourth quarter and by $\$ 991$ million, or 11.4 percent, over the year. However, noncurrent loans fell by $\$ 1.2$ billion in the quarter and by $\$ 3.8$ billion ( 28.6 percent) for the year. As a result, the "coverage ratio" (reserves to noncurrent loans), improved to 81 cents for each dollar of noncurrent loans at year-end, up from 75 cents at the end of the third quarter and from 65 cents at the end of 1993.
Earnings improved in the Southwest and West regions in the fourth quarter. Thrifts in the West Region showed a $\$ 104$ million increase in earnings compared to the previous quarter. Southwest Region thrifts reported $\$ 60$ million more in earnings than in the third quarter, with $\$ 34$ million contributed by the addition of a large California institution in the fourth quarter (see footnote 2). All other regions had lower earnings in the fourth quarter. The Midwest Region reported a loss for the quarter because one institution with 15 percent of the region's assets took a restructuring charge. All regions reported aggregate profits for the full year, but restructuring charges significantly reduced profits in the Midwest and West regions. The Midwest Region reported an ROA of 0.39 percent for 1994 while the West Region had an ROA of 0.31 percent. All other regions reported ROAs of over 0.75 percent.

The industry reduced its overhang of troubled real estate assets during 1994. Troubled real estate assets - noncurrent real estate loans plus other real estate owned - declined by one-third ( $\$ 6.8$ billion) in the year. Troubled real estate assets fell by $\$ 2.7$ billion in the West Region and $\$ 3.0$ billion in the Northeast. However, charge-offs were significantly higher in the West, reflecting weaker real estate markets there. Real estate loan charge-offs in the West ( $\$ 1.6$ billion) were more than double the amount ( $\$ 709$ million) charged off by thrifts in the Northeast. The higher losses in the West meant lower earnings. In 1994, the West Region set aside $\$ 1.4$ billion in provisions to replenish loan loss reserves, in contrast to the $\$ 699$ million loss provision reported by Northzast institutions.

Troubled Real Estate Asset Rates by Region
1990 - 1994 1990 - 1994

*Loans secured by real estate past due 90 days or more or in nonaccrual status plus other real estate owned (OREO) as a percent of total real estate loans plus OREO.

Total assets held by savings institutions increased for the second consecutive quarter. Industry assets rose by $\$ 2.5$ billion during the fourth quarter and registered a $\$ 7.8$-billion increase for the year. This is the first annual growth in assets since 1988. The largest increase during the fourth quarter was in loans secured by 1-4 family residential properties, which grew by $\$ 11.1$ billion, accounting for most of the year's increase in mortgage loans of $\$ 12.1$ billion. ${ }^{3}$ Securities decreased $\$ 5.8$ billion during the fourth quarter, but grew by $\$ 14.5$ billion for the year. Some of the reduction is attributable to new accounting rules (FASB Statement 115) which require institutions to value certain securities at fair (market) value, see Notes to Users, page 21.

[^2]For the ninth consecutive quarter, thrifts reduced their reliance on deposits in favor of other borrowed funds. Deposits declined by $\$ 11.2$ billion while other borrowed funds increased by $\$ 15.0$ billion. For the year, deposits declined by $\$ 37.0$ billion ( 4.8 percent), while other borrowings increased by $\$ 44.4$ billion. The industry's core capital (leverage) ratio stood at 7.66 percent at the end of the fourth quarter, up from

## Number and Assets of FDIC-Insured

 Savings Institutions, 1984-1994
7.45 percent at the beginning of the year and a marked improvement compared with 1990 when it stood at 4.62 percent. Savings institutions' core capital ratio now exceeds commercial banks' core capital ratio of 7.64 percent.
The number of savings institutions continued to decline through year-end. During 1994 the number of institutions declined by 110, from 2,262 to 2,152. Commercial banks acquired 80 institutions with $\$ 40.6$ billion in assets during 1994, while consolidation within the thrift industry accounted for a decline

Number of Mutual and Stock Savings Institutions 1985-1994

Annual Return on Assets (ROA)
1984-1994

of 46 institutions. During the fourth quarter, commercial banks purchased 13 thrifts with $\$ 8.2$ billion in assets. Six thrifts with $\$ 5.6$ billion in assets converted to commercial banks in the fourth quarter. The thrift industry gained $\$ 1$ billion in assets from commercial banks, primarily through acquisitions. During the year, one hundred thrifts with about $\$ 38$ billion in assets converted from mutual to stock ownership, down from 122 conversions and $\$ 45.8$ billion in assets in 1993.
Two institutions failed in the fourth quarter. For all of 1994, four institutions failed, half the number that failed in 1993. The number of "problem" institutions at year end was 71 with $\$ 39$ billion in assets, down from 84 institutions with $\$ 59$ billion in assets at the end of the third quarter, and 146 institutions with $\$ 92$ billion in assets at the end of 1993. Steady improvement in the condition of the industry has reduced the assets of "problem" institutions, for the second straight year, assets of these institutions were reduced by about half.

Assets of Mutual and Stock Savings Institutions 1985-1994

# Total Domestic Deposits Increase 

BIF Rises To \$21.8 Billion And Coverage Ratio To \$1.15
SAIF Dips Slightly Due To Fourth-Quarter Reserves
"Oakar" And "Sasser" Share Of SAIF Domestic Deposits Surpasses 32 Percent

The total assets of all 12,596 private-sector FDICinsured institutions surpassed the $\$ 5$ trillion level at year-end 1994, having risen $\$ 90$ billion ( 1.8 percent) in the fourth quarter and $\$ 312$ billion ( 6.6 percent) for the full year (the year-to-year growth includes accounting changes; see Notes to Users). Of the $\$ 90$ billion growth in the fourth quarter, $\$ 70$ billion was funded by deposit growth. In contrast to recent quarters, deposits in domestic offices increased by $\$ 41.7$ billion, outpacing growth in foreign-office deposits of $\$ 28.7$ billion.
Two FDIC-insured institutions failed in the fourth quarter, including one BIF-member savings bank and one SAIF-member savings bank. For all of 1994, there were 13 BIF-member failures, with total assets of $\$ 1.4$ billion, and two SAIF-member failures, with total assets of $\$ 137$ million. By comparison, failures in 1993 included 41 BIF members ( $\$ 3.5$ billion) and nine SAIF members ( $\$ 6.1$ billion). At year-end 1994, the BIF had a balance of $\$ 21.8$ billion (unaudited), or $\$ 1.15$ for each $\$ 100$ of insured deposits, and the SAIF had a balance of $\$ 1.9$ billion (unaudited) and a coverage ratio of $\$ 0.28$. The BIF coverage ratio rose from $\$ 1.03$ at the end of September, while the SAIF balance and coverage ratio slipped from September levels ( $\$ 2.0$ billion and $\$ 0.29$ ) as reserves were set aside in the fourth quarter for anticipated future losses. The Resolution Trust Corporation is responsible for the resolution costs of SAIFinsured institutions that fail before July 1, 1995, after which the SAIF assumes responsibility.
An institution's insurance fund membership and primary federal supervisor are generally determined by the institution's charter type. BIF members are predominantly commercial banks supervised by one of the three federal banking agencies, and SAIF members are predominantly savings institutions supervised by the Office of Thrift Supervision (OTS). However, as described below, these relationships can be altered by deposit acquisitions and charter switches.
"Oakar" deposits. A member of one insurance fund may acquire deposits insured by the other fund, but this portion of the acquiring institution's deposits retains coverage under the other fund. At year-end 1994, there were 718 BIF-member Oakars, compared to 688 in September and 570 at year-end 1993. At year-end 1994, these institutions held $\$ 180$ billion in SAIF-insured deposits. This was 25 percent of all SAIF domestic deposits (including conservatorships), up from 23.3 percent in September and 18.8 percent at year-end
1993. SAIF-insured deposits held by BIF members grew $\$ 13.5$ billion during the fourth quarter, buta portion of this growth was attributable to the annual reporting adjustment to these deposits required by the enabling legislation. ${ }^{1}$ On December 31, 52 SAIF-member institutions held an estimated $\$ 10.7$ billion in BIF-insured deposits, which was 0.4 percent of BIF domestic deposits. SAIFmember Oakar deposits are up from $\$ 8.7$ billion in September and $\$ 4.8$ billion at the end of 1993 :
"Sasser" institutions. Since 1989, institutions have been permitted to switch charter type and primary federal supervisor without changing insurance fund membership. On December 31, 1994, 319 SAIF-member institutions were subject to supervision by one of the three federal banking agencies. The number of Sassers, which include both state-chartered savings banks and commercial banks, was up from 308 in September and 276 at the end of 1993. At year-end 1994, these institutions held SAIF deposits of $\$ 52.8$ billion, or 7.3 percent of all SAIF deposits, compared to 7.1 percent in September and 6.1 percent in December 1993.

FICO bonds. The Financing Corporation (FICO) was established by Congress in 1987 to issue bonds to fund an early attempt to resolve the problems of the thrift industry and its former deposit insurance fund. While this attempt fell short, the thrift industry is required to pay interest on these bonds of about $\$ 780$ million per year until they mature in the years 2017 to 2019. To accomplish this, Congress gave FICO a priority claim on SAIF assessment income. However, this claim can only be paid from assessments of savings associations that are SAIF members, and this excludes BIF-member Oakar banks and all Sasser institutions, which are savings banks. As the proportion of SAIF deposits held by Oakars and Sassers grows, the fixed FICO assessment must be paid from a shrinking base. Oakar and Sasser institutions currently hold about one-third of the SAIF assessment base, but if this portion were to increase to about one-half, assessment income available to FICO would be insufficient. Under certain assumptions, this could occur within ten years. Other possible causes of assessment-base shrinkage would also contribute to a potential FICO-assessment shortfall.

This publication contains financial data and other information for depository institutions insured by the Federal Deposit Insurance Corporation (FDIC). These notes are an integral part of this publication and provide information regarding the comparability of source data and reporting differences over time. The information presented in the FDIC Quarterly Banking Profile is divided into the following groups of institutions:

## FDIC-Insured Commercial Banks <br> (Tables I-A through V-A.)

This section covers commercial banks insured by the FDIC either through the Bank Insurance Fund (BIF) or through the Savings Association Insurance Fund (SAIF). These institutions are regulated by and submit financial reports to one of the three federal commercial bank regulators (the Board of Governors of the Federal Reserve System, the FDIC or the Office of the Comptroller of the Currency).

## FDIC-Insured Savings Institutions (Tables I-B through V-B.)

This section covers savings institutions insured by either BIF or SAIF that operate under state or federal banking codes applicable to thrift institutions, except for one self-liquidating institution primarily funded by the FSLIC Resolution Fund (FRF). Savings institutions that have been placed in Resolution Trust Corporation conservatorship are also excluded from these tables while in conservatorship. The institutions covered in this section are regulated by and submit financial reports to one of two Federal regulators - the FDIC or the Office of Thrift Supervision (OTS).

## FDIC-Insured Institutions by Insurance Fund (Tables I-C through II-E.)

Summary balance-sheet and earnings data are provided for commercial banks and savings institutions according to insurance fund membership. BIF-member institutions may acquire SAIF-insured deposits, resulting in institutions with some deposits covered by both insurance funds. Also, SAIF members may acquire BIF-insured deposits. The insurance fund membership does not necessarily reflect which fund insures the largest percentage of an institution's deposits. Therefore, the BIF-member and the SAIF-member tables each include deposits from both insurance funds. Depository institutions that are not insured by the FDIC through either the BIF or SAIF are not included in the FDIC Quarterly Banking Profile. U.S. branches of institutions headquartered in foreign countries and non-deposit trust companies are not included. Efforts are made to obtain financial reports for all active institutions. However, in some cases, final financial reports are not available for institutions that have closed or converted their charter.

## DATA SOURCES

The financial information appearing in this publication is obtained primarily from the Federal Financial Institutions Examination Council (FFIEC) Call Reports and the OTS Thrift Financial Reports submitted by all FDIC-insured depository institutions. This information is stored on and retrieved from the FDIC's Research Information System (RIS) data base.

## COMPUTATION METHODOLOGY

Certain adjustments are made to the OTS Thrift Financial Reports to provide closer conformance with the reporting and accounting requirements of the FFIEC Call Reports. The detailed schedules of the Thrift Financial Report reflect the consolidation of the parent thrift with all finance subsidiaries. All other subsidiaries are reported as investments on an equity basis or a cost basis. Some accounting differences exist, such as asset sales with recourse, for which the data necessary to reconcile these differences are not reported.
All asset and liability figures used in calcuiating performance ratios represent average amounts for the period (beginning-of-period amount plus end-of-period amount plus any interim periods, divided by the total number of periods). For "pooling-of-interest" mergers, the assets of the acquired institution(s) are included in average assets since the year-to-date income includes the results of all merged institutions. No adjustments are made for "purchase accounting" mergers. Growth rates represent the percentage change over a 12-month period in totals for institutions in the base period to totals for institutions in the current period. Tables III and IV do not provide growth rates for the "Asset Size Distribution" since many institutions migrate between size groups.

## Asset Migrations

All data are collected and presented based on the location of each reporting institution's main office. When a main office is relocated to another state, adjustments to prior-period data may be made to more accurately reflect geographic growth rates. In other situations, no adjustments are possible. For example, reported data may include assets and liabilities located outside of the reporting institution's home state. Also, institutions may change their charters, resulting in an inter-industry migration, e.g. savings institutions can convert to commercial banks. These situations can affect state and regional totals.

## RECENT ACCOUNTING CHANGES

FASB Statement 115, "Accounting for Certain Investments in Debt and Equity Securities." Requires that securities that are not held in trading accounts be measured at either amortized cost or fair (market) value, depending on their classification category. For additional details, see "Notes to Users," First Quarter, 1994, Quarterly Banking Profile.
FASB Interpretation 39, "Offsetting of Amounts Related to Certain Contracts." Covers fair value amounts recognized as assets and liabilities on the balance sheet for off-balancesheet derivative contracts under which the amounts to be received or paid or items to be exchanged depend on future events or other factors (e.g., future and forward contracts, interest-rate swaps, exchange-rate swaps, and other conditional and exchange contracts). For additional details, see "Notes to Users," First Quarter, 1994, Quarterly Banking Profile.

## DEFINITIONS (in alphabetical order)

All other assets - total cash, balances due from depository institutions, premises, fixed assets, direct investments in real estate, investment in unconsolidated subsidiaries, customers' liability on acceptances outstanding, assets held in trading accounts, federal funds sold, securities purchased with agreements to resell, and other assets. Beginning $3 / 31 / 94$, FASB Interpretation 39 limited the netting of related trading assets and liabilities, which had the effect of increasing the amount of trading account assets reported.
All other liabilities - bank's liability on acceptances, lim-ited-life preferred stock, and other liabilities. Effective $3 / 31 / 94$, includes revaluation losses on assets held in trading accounts.
BIF-insured deposits (estimated) - the amount of deposits in accounts of less than \$100,000 insured by the BIF. For SAIF-member "Oakar" institutions, it represents the adjusted attributable amount acquired from BIF members.
Capital category distribution - each institution's capital category is calculated or estimated from its financial report and does not reflect supervisory upgrades or downgrades:

|  | Total Risk-Based Capital * |  | Tier 1 Risk-Based Capital * |  | Tier 1 everage | Tangible Equity |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Well-capitalized | $\geq 10 \%$ | and | $\geq 6 \%$ | and | $\geq 5 \%$ | - |
| Adequately capitalized | $\geq 8 \%$ | and | $\geq 4 \%$ | and | $\geq 4 \%$ | - |
| Undercapitalized | <8\% | or | <4\% | or | <4\% | - |
| Significantly undercapitalized | <6\% | or | <3\% | or | <3\% | - |
| Critically undercapitaliz | zed - |  | - |  | - | $\leq 2 \%$ |

Construction and development loans - includes loans for all property types under construction, as well as loans for land acquisition and development.
Core capital - common equity capital plus noncumulative perpetual preferred stock plus minority interest in consolidated subsidiaries, less goodwill and other ineligible intangible assets. The amount of eligible intangibles (including mortgage servicing rights) included in core capital is limited in accordance with supervisory capital regulations.
Cost of funding earning assets - total interest expense paid on deposits and other borrowed money as a percentage of average earning assets.
Direct and indirect investments in real estate - excludes loans secured by real estate and property acquired through foreclosure.
Earning assets - all loans and other investments that earn interest or dividend income.
Estimated insured deposits - estimated amount of insured deposits (account balances less than $\$ 100,000$ ). The sum of all deposit balances in accounts of less than $\$ 100,000$ plus the number of accounts with balances greater than $\$ 100,000$ multiplied by $\$ 100,000$.
Failed/assisted institutions - An institution fails when regulators take control of the institution, placing the assets and liabilities into a bridge bank, conservatorship, receivership, or another healthy institution. This action may require
the FDIC - or the RTC - to provide funds to cover losses. An institution is defined as "assisted" when the institution remains open and receives some insurance funds in order to continue operating.
FHLB advances - borrowings from the Federal Home Loan Bank (FHLB) reported by institutions that file a Thrift Financial Report. Institutions that file a Call Report do not report borrowings ("advances") from the FHLB separately.
Goodwill and other intangibles - intangible assets include mortgage servicing rights, purchased credit card relationships and other identifiable intangible assets.
Loans secured by real estate - includes home equity loans, junior liens secured by 1-4 family residential properties and all other loans secured by real estate.
Loans to individuals - includes outstanding credit card balances and other secured and unsecured consumer loans.
Long-term assets ( $5+$ years) - loans and debt securities with remaining maturities or repricing intervals of over five years.
Mortgage-backed securities - certificates of participation in pools of residential mortgages and collateralized mortgage obligations issued or guaranteed by governmentsponsored or private enterprises. Effective $3 / 31 / 94$, the full implementation of FASB 115 meant that a portion of banks' mortgage-backed securities portfolio is now reported based upon fair (market) values; previously, all mortgage-backed securities not held in trading accounts were reported at either amortized cost or lower of cost or market.
Net charge-offs - total loans and leases charged off (removed from balance sheet because of uncollectibility), less amounts recovered on loans and leases previously charged off.
Net interest margin - the difference between interest and dividends earned on interest-bearing assets and interest paid to depositors and other creditors, expressed as a percentage of average earning assets. No adjustments are made for interest income that is tax exempt.
Net operating income - income excluding discretionary transactions such as gains (or losses) on the sale of investment securities and extraordinary items. Income taxes subtracted from operating income have been adjusted to exclude the portion applicable to securities gains (or losses).
Noncurrent assets - the sum of loans, leases, debt securities and other assets that are 90 days or more past due, or in nonaccrual status. Noncurrent debt securities and other assets were not included prior to March 1991.
Noncurrent loans \& leases - the sum of loans and leases 90 days or more past due, and loans and leases in nonaccrual status.
Number of institutions reporting - the number of institutions that actually filed a financial report.
Off-balance-sheet derivatives - represents the sum of the following: interest-rate contracts, defined as: the notional value of interest-rate swaps, futures and forward
contracts and option contracts; foreign-exchange-rate contracts and commodity and equity contracts (defined similarly to interest-rate contracts).
Futures and forward contracts - a contract in which the buyer agrees to purchase and the seller agrees to sell, at a specified future date, a specific quantity of underlying at a specified price or yield. These contracts exist for a variety of underlyings, including the traditional agricultural or physical commodities, as well as currencies and interest rates. Futures contracts are standardized and are traded on organized exchanges which set limits on counterparty credit exposure. Forward contracts do not have standardized terms, and are traded over the counter.

Option contracts - a contract in which the buyer acquires the right to buy from or sell to another party some specified amount of underlying at a stated price (strike price) during a period or on a specified future date, in return for compensation (such as a fee or premium). The seller is obligated to purchase or sell the underlying at the discretion of the buyer of the contract.
Swaps - an obligation between two parties to exchange a series of cash flows at periodic intervals (settlement dates), for a specified period. The cash flows of a swap are either fixed, or determined for each settlement date by multiplying the quantity of the underlying (notional principal) by specified reference rates or prices. Except for currency swaps, the notional principal is used to calculate each payment but is not exchanged.
Other borrowed funds - federal funds purchased, securities sold with agreements to repurchase, demand notes issued to the U.S. Treasury, other borrowed money, mortgage indebtedness and obligations under capitalized leases. Effective $3 / 31 / 94$, includes newly-reported item "Trading liabilities," less revaluation losses on assets held in trading accounts.
Other real estate owned - primarily foreclosed property. Direct and indirect investments in real estate ventures are excluded. The amount is reflected net of valuation allowances. For institutions that file a Thrift Financial Report (TFR), the valuation allowance subtracted also includes allowances for other repossessed assets. Also, for TFR filers the components of other real estate owned are reported gross of valuation allowances.
Percent of institutions with earnings gains - the percent of institutions that increased their net income (or decreased their losses) compared to the same period a year earlier.
"Problem" institutions - Federal regulators assign a composite rating to each financial institution, based upon an evaluation of financial and operational criteria. The rating is based on a scale of 1 to 5 in ascending order of supervisory concern. "Problem" institutions are those institutions with financial, operational, or managerial weaknesses that
threaten their continued financial viability. Depending upon the degree of risk and supervisory concern, they are rated either a " 4 " or " 5 ". For all BIF-member institutions, and for all SAIF-member institutions for which the FDIC is the primary federal regulator, FDIC composite ratings are used. For all SAIF-member institutions whose primary federal regulator is the OTS, the OTS composite rating is used.
Restructured loans and leases - loan and lease financing receivables with terms restructured from the original contract. Excludes restructured loans and leases that are not in compliance with the modified terms.
Return on assets - net income (including gains or losses on securities and extraordinary items) as a percentage of average total assets. The basic yardstick of bank profitability.
Return on equity - net income (including gains or losses on securities and extraordinary items) as a percentage of average total equity capital.
Risk-weighted assets - assets adjusted for risk-based capital definitions which include on-balance-sheet as well as off-balance-sheet items multiplied by risk-weights that range from zero to 100 percent. A conversion factor is used to assign a balance sheet equivalent amount for selected off-balance-sheet accounts.
SAIF-insured deposits (estimated) - the amount of deposits in accounts of less than $\$ 100,000$ insured by the SAIF. For BIF-member "Oakar" institutions, it represents the adjusted attributable amount acquired from SAIF members.
Securities - excludes securities held in trading accounts. Effective $3 / 31 / 94$, the full implementation of FASB 115 meant that a portion of banks' securities portfolios is now reported based upon fair (market) values; previously, all securities not in held trading accounts were reported at either amortized cost or lower of cost or market.
Troubled real estate asset rate - noncurrent real estate loans plus other real estate owned as a percent of total real estate loans and other real estate owned.
Unused loan commitments - includes credit card lines, home equity lines, commitments to make loans for construction, loans secured by commercial real estate, and unused commitments to originate or purchase loans.
Volatile liabilities - the sum of large-denomination time deposits, foreign-office deposits, federal funds purchased, securities sold under agreements to repurchase, and other borrowings. Beginning $3 / 31 / 94$, new reporting detail permits the exclusion of other borrowed money with original maturity of more than one year; previously, all other borrowed money was included. Also beginning $3 / 31 / 94$, the newly-reported item "Trading liabilities," less revaluation losses on assets held in trading accounts, is included.
Yield on earning assets - total interest, dividend and fee income earned on loans and investments as a percentage of average earning assets.

[^0]:    *Excludes home equity loans.

[^1]:    ${ }^{1}$ Third quarter earnings were adjusted down from $\$ 2.1$ billion reported in the last Quarterly Banking Profile to $\$ 1.9$ billion, due to an amendment filed by a savings institution in California reflecting an extraordinary charge.
    ${ }^{2}$ First Madison Bank, FSB of Dallas, Texas ( $\$ 981$ million in total assets) merged with First Nationwide FSB of San Francisco, California ( $\$ 14$ billion in assets) during the fourth quarter of 1994. The combined institution is headquartered in Dallas, Texas.

[^2]:    ${ }^{3}$ In the fourth quarter, American Savings Bank, Stockton, California reclassified securities as loans, adding $\$ 3.2$ billion to 1-4 family residential loans and reducing securities by $\$ 2.4$ billion.

[^3]:    ${ }^{1}$ An institution's Oakar deposits are adjusted annually by the institution's overall deposit growth rate, net of acquisitions, thereby holding the proportion of Oakar deposits constant.
