## FIRST-QUARTER HIGHLIGHTS

- COMMERCIAL BANK EARNINGS TOP \$12 BILLION FOR THIRD CONSECUTIVE QUARTER Commercial banks earned $\$ 12.0$ billion in the first quarter of 1996, an increase of 8.2 percent ( $\$ 908$ million) over the first quarter of 1995. Higher noninterest revenues and increased net interest income outweighed increases in loan-loss provisions and overhead costs associated with merger expenses. The improvement in noninterest income reflected higher fee income and increased revenues from trading activities. The growth in net interest income was due to strong earning asset growth, as net interest margins were slightly narrower than a year ago.

## - LOAN GROWTH CONTINUES TO SLOW

Total loans grew by $\$ 29.3$ billion, the smallest quarterly rise in two years. Commercial and industrial loan growth remained strong, but credit card loans registered a $\$ 13.0$-billion decline, due to seasonal pay-downs of card balances and securitization of credit-card receivables at several large credit-card banks. Total assets of commercial banks registered a $\$ 4.3$-billion decline in the first quarter, due to a seasonal drop in cash items in process of collection and balances due from depository institutions (down $\$ 32.4$ billion).

## - TROUBLED LOANS SHOW SLIGHT INCREASE

Noncurrent loans rose for only the second time in the last five years (they also increased in the first quarter of 1995, due to changes in accounting rules). Total noncurrent loans grew by $\$ 659$ million, to 1.18 percent of total loans, from 1.17 percent at the end of 1995. These are the two lowest percentages in the fourteen years that banks have reported noncurrent loan amounts. The largest increases were in residential mortgage loans, where they grew by $\$ 261$ billion, and in commercial and industrial loans, where they rose by $\$ 243$ million. Noncurrent agricultural loans had a mostly seasonal increase of $\$ 180$ million, and noncurrent commercial real estate loans rose by $\$ 115$ million.

- CREDIT LOSSES RISE ON CONSUMER LOANS

Net charge-offs totalled $\$ 3.6$ billion in the first quarter, a 58 -percent ( $\$ 1.3$ billion) increase over the same period in 1995. The annualized net charge-off rate in the first quarter was 0.55 percent of total loans, the highest first-quarter rate since 1993. Most of the higher charge-offs came from consumer loans. Net charge-offs on credit-card loans, at \$2.2 billion, were $\$ 845$ million higher than in the first quarter of 1995 . Net charge-offs on other installment loans totaled $\$ 631$ million, slightly less than two times the $\$ 389$ million banks charged off a year ago. Net charge-offs of commercial and industrial loans, at $\$ 422$ million, were $\$ 204$ million more than banks charged off in the first quarter of 1995. In contrast, net charge-offs on real estate loans were $\$ 73$ million ( 21 percent) lower than a year ago.

- ONE-TIME GAINS LIFT SA VINGS INSTITUTIONS' EARNINGS TO \$2.5 BILLION

Gains from branch sales and sales of securities helped insured savings institution earnings to a quarterly record of $\$ 2.5$ billion. Industry profits surpassed the previous record of $\$ 2.4$ billion, earned in the first quarter of 1993, when earnings received a boost from accounting rule changes. The average ROA for the first quarter was 1.01 percent, the first time that it has exceeded the one-percent level. Excluding the gains from branch sales and sales of securities, ROA would have been approximately 0.83 percent, an improvement over recent quarters. Most of the improvement in profitability occurred at institutions with more than \$1 billion in assets.

Retail Loans versus Loans to Commercial Borrowers
(as a \% of Total Loans)

Loans (\$ Blllions):

| ■ Commercial Borrowers | $\$ 1,230$ | $\$ 1,321$ | $\$ 1,241$ | $\$ 1,222$ | $\$ 1,447$ | $\$ 1,484$ |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
| Retail Loans | 614 | 752 | 823 | 935 | 1,161 | 1,154 |

Loans_to Commercla_ Borrowars_(Credit Blisk_Concentrated)_ - These are loans that can have relatively large balances at risk to a single borrower. A single loan may represent a significant portion of an institution's capital or income. Therefore, a relatively small number of defaults could impair an institution's capital or income. These loans include commercial and industrial loans, commercial real estate, construction loans, and agricultural loans.

Retail Loans (Credif Bisk Diversifled) - These are loans that typically have relatively small balances spread among a large number of borrowers. A number of defauits are likely but typically do not impair an institution's capital or income. These loans include consumer and credit card loans, 1-4 family residentlal mortgages and home equity loans.

Loans (\$ Billions):

| $\square$ Commercial Borrowers | $\$ 328$ | $\$ 298$ | $\$ 197$ | $\$ 151$ | $\$ 146$ | $\$ 146$ |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
| $\square$ Retail Loans | 631 | 651 | 547 | 493 | 518 | 520 |

Loans to Commerclal Borrowers (Credit Blsk Concentrated) - These are loans that can have relatively large balances at risk to a single borrower. A single loan may represent a significant portion of an institution's capital or income. Therefore, a relatively small number of defaults could impair an institution's capital or income. These loans include commercial and industrial loans, commercial real estate, construction loans, and agricultural loans.

Betall_Loans (Credit_Risk Diversfiled) - These are loans that typically have relatively small balances spread among a large number of borrowers. A number of defaults are likely, but typically do not impair an institution's capital or income. These loans include consumer and credit card loans, 1-4 family residential mortgages and home equity loans.

Total Securities* as a Percent of Assets

Note: Includes insured branches of foreign banks.

## NOTES TO USERS

This publication contains financial data and other information for depository institutions insured by the Federal Deposit Insurance Corporation (FDIC). These notes are an integral part of this publication and provide information regarding the comparability of source data and reporting differences over time. The information presented in the FDIC Quarterly Banking Profile is divided into the following groups of institutions:

## FDIC-Insured Commercial Banks

This section covers commercial banks insured by the FDIC either through the Bank Insurance Fund (BIF) or through the Savings Association Insurance Fund (SAIF). These institutions are regulated by and submit financial reports to one of the three federal commercial bank regulators (the Board of Governors of the Federal Reserve System, the FDIC or the Office of the Comptroller of the Currency).

## FDIC-Insured Savings Institutions

This section covers savings institutions insured by either BIF or SAIF that operate under state or federal Danking codes applicable to thrift institutions, except for one self-liquidating institution primarily funded by the FSLIC Resolution Fund (FRF). Savings institutions that have been placed in Resolution Trust Corporation conservatorship are also excluded fron these tables while in conservatorship. The institutions coverec in this section are regulated by and submit financial reports to one of two Federal regulators - the FDIC or the Office of Thrift Supervision (OTS).

## FDIC-Insured Institutions by Insurance found

Summary balance-sheet and earnings data are provided for commercial banks and savings institutions accor, ling to insurance fund membership. BIF-member institutions may acquire SAIF-insured deposits, resulting in institutions with some deposits covered by both insurance funds. Also, SAIF members may acquire BIF-insured deposits. The insurance fund membership does not necessarily reflect which fund insures the largest percentage of an institution's deposits. Therefore, the BIF-member and the SAIFmember tables each include deposits from both insurance funds. Depository institutions that are not insured by the FDIC through either the BIF or SAIF are not included in the FDIC Quarterly Banking Profile. U.S. branches of institutionis headquartered in foreign countries and non-deposit trust companies are not included. Efforts are made to obtain financial reports for all active institutions. However, in some cases, final financial reports are not available for institutions that have closed or converted their charter.

## DATA SOURCES

The financial information appearing in this publication is obtained primarily from the Federal Financial Institutions Examination Council (FFIEC) Call Reports and the OTS Thrift Financial Reports submitted by all FDIC-insured depository institutions. This information is stored on and retrieved from the FDIC's Research Information System (RIS) data base.

## COMPUTATION METHODOLOGY

Certain adjustments are made to the OTS Thrift Financial Reports to provide closer conformance with the reporting and accounting requirements of the FFIEC Call Reports. The detailed schedules of the Thrift Financial Report reflect the consolidati: $n$ of the parent thrift with all finance subsidiaries. All other subsiliaries are reported as investments on an equity basis or a cosi basis. Some accounting differences exist, such as asset sales with recourse, for which the data necessary to reconcile these differences are not reported.
All asset and liability figures used in calculating performance ratios represent average amounts for the period (beginn.ng-of-period amount plus end-of-period amount plus any interim periods, divided by the total number of periods). For "pooling-of-interest"
mergers, the assets of the acquired institution(s) are included in average assets since the year-to-date income includes the results of all merged institutions. No adjustments are made for "purchase accounting" mergers. Growth rates represent the percentage change over a 12-month period in totals for institutions in the base period to totals for institutions in the current period. Tables III and IV do not provide growth rates for the "Asset Size Distribution" since many institutions migrate between size groups.

## Asset Migrations

All data are collected and presented based on the location of each reporting institution's main office. When a main office is relocated to another state, adjustments to prior-period data may be made to more accurately reflect geographic growth rates. In other situations, no adjustments are possible. For example, reported data may include assets and liabilities located outside of the reporting institution's home state. Also, institutions may change their charters, resulting in an inter-industry migration, e.g. savings institutions can convert to commercial banks. These situations can affect state and regional totals.

## RECENT ACCOUNTING CHANGES

FASB Statement 115, "Accounting for Certain Investments in Debt and Equity Securities" requires that securities that are not held in trading accounts be measured at either amortized cost or fair (market) value, depending on their classification category ("available-for-sale" or "held-to-maturity"). For additional details, see "Notes to Users," First Quarter, 1994, Quarterly Banking Profile.
On November 15, 1995 the FASB released a guide to the implementation of Statement 115 and provided a window (November 15, 1995 through December 31, 1995) during which banks could elect to sell or reclassify securities between categories without violating the provisions of the accounting rule. In most cases, Statement 115 requires an automatic marking-to-market of the entire held-to-maturity portfolio (previously valued at amortized cost) if any held-to-maturity security is sold or transferred. The one-time opportunity to avoid this requirement was designed to allow the sale or reclassification of securities from the held-to-maturity category to available-for-sale or the trading portfolio without tainting the entire held-to-maturity category. The FASB announcement and guide also sought to provide further clarification of Statement 115, and correct misinterpretations of the original pronouncement.

## DEFINITIONS (in alphabetical order)

Capital category distribution - each institution's capital category is calculated or estimated from its financial report and does not reflect supervisory upgrades or downgrades:

|  | Total <br> Risk-Based <br> Capital * | Tier 1 <br> Risk-Based <br> Capital * | Tier 1 | Tangible <br> Leverage | Equity |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |

*As a percentage of risk-weighted assets.
Construction and development loans - includes loans for all property types under construction, as well as loans for land acquisition and development.
Derivative contracts, gross fair values (positive/negative) are reported separately and represent the amount at which a contract could be exchanged in a transaction between willing parties, other than in a forced or liquidation sale. If a quoted market
price is available for a contract, the fair value reported for that contract is calculated using this market price. If quoted market prices are not available, the reporting banks use the best estimate of fair value based on quoted market prices of similar contracts or on valuation techniques such as discounted cash flows. This information is reported only by banks with assets greater than $\$ 100$ million.
Loans secured by real estate-includes home equity loans, junior liens secured by $1-4$ family residential properties and all other loans secured by real estate.
Loans to individuals - includes outstanding credit card balances and other secured and unsecured consumer loans.
Mortgage-backed securities - certificates of participation in pools of residential mortgages and collateralized mortgage obligations issued or guaranteed by government-sponsored or private enterprises. Effective $3 / 31 / 94$, the full implementation of FASB 115 meant that a portion of banks' mortgage-backed securities portfolio is now reported based upon fair (market) values; previously, all mortgage-backed securities not held in trading accounts were reported at either amortized cost or lower of cost or market.
Net charge-offs - total loans and leases charged off (removed from balance sheet because of uncollectibility), less amounts recovered on loans and leases previously charged off.
Net interest margin - the difference between interest and dividends earned on interest-bearing assets and interest paid to depositors and other creditors, expressed as a percentage of average earning assets. No adjustments are made for interest income that is tax exempt.
Net operating income - income excluding discretionary transactions such as gains (or losses) on the sale of investment securities and extraordinary items. Income taxes subtracted from operating income have been adjusted to exclude the portion applicable to securities gains (or losses).
Noncurrent assets - the sum of loans, leases, debt securities and other assets that are 90 days or more past due, or in nonaccrual status. Noncurrent debt securities and other assets were not included prior to March 1991.
Noncurrent loans \& leases - the sum of loans and leases 90 days or more past due, and loans and leases in nonaccrual status.
Off-balance-sheet derivatives - represents the sum of the following: interest-rate contracts (defined as the notional value of interest-rate swap, futures, forward and option contracts), foreign-exchange-rate contracts, commodity contracts and equity contracts (defined similarly to interest-rate contracts).
Futures and forward contracts - a contract in which the buyer agrees to purchase and the seller agrees to sell, at a specified future date, a specific quantity of underlying at a specified price or yield. These contracts exist for a variety of underlyings, including the traditional agricultural or physical commodities, as well as currencies and interest rates. Futures contracts are standardized and are traded on organized exchanges which set limits on counterparty credit exposure. Forward contracts do not have standardized terms and are traded over the counter.
Option contracts - a contract in which the buyer acquires the right to buy from or sell to another party some specified amount of underlying at a stated price (strike price) during a period or on
a specified future date, in return for compensation (such as a fee or premium). The seller is obligated to purchase or sell the underlying at the discretion of the buyer of the contract.
Swaps - an obligation between two parties to exchange a series of cash flows at periodic intervals (settlement dates), for a specified period. The cash flows of a swap are either fixed, or determined for each settlement date by multiplying the quantity of the underlying (notional principal) by specified reference rates or prices. Except for currency swaps, the notional principal is used to calculate each payment but is not exchanged. to buy from or sell to another party some specified amount of underlying at a stated price (strike price) during a period or on a specified future date, in return for compensation (such as a fee or premium). The seller is obligated to purchase or sell the underlying at the discretion of the buyer of the contract.
Other real estate owned - primarily foreclosed property. Direct and indirect investments in real estate ventures are excluded. The amount is reflected net of valuation allowances. For institutions that file a Thrift Financial Report (TFR), the valuation allowance subtracted also includes allowances for other repossessed assets. Also, for TFR filers the components of other real estate owned are reported gross of valuation allowances.
"Problem" institutions - Federal regulators assign a composite rating to each financial institution, based upon an evaluation of financial and operational criteria. The rating is based on a scale of 1 to 5 in ascending order of supervisory concern. "Problem" institutions are those institutions with financial, operational, or managerial weaknesses that threaten their continued financial viability. Depending upon the degree of risk and supervisory concern, they are rated either a " 4 " or " 5 ". For all BIF-member institutions, and for all SAIF-member institutions for which the FDIC is the primary federal regulator, FDIC composite ratings are used. For all SAIF-member institutions whose primary federal regulator is the OTS, the OTS composite rating is used.
Return on assets - net income (including gains or losses on securities and extraordinary items) as a percentage of average total assets. The basic yardstick of bank profitability.
Return on equity - net income (including gains or losses on securities and extraordinary items) as a percentage of average total equity capital.
Risk-weighted assets - assets adjusted for risk-based capital definitions which include on-balance-sheet as well as off-balancesheet items multiplied by risk-weights that range from zero to 100 percent. A conversion factor is used to assign a balance sheet equivalent amount for selected off-balance-sheet accounts.
Securities - excludes securities held in trading accounts. Effective $3 / 31 / 94$, the full implementation of FASB 115 meant that a portion of banks' securities portfolios is now reported based upon fair (market) values; previously, all securities not held in trading accounts were reported at either amortized cost or lower of cost or market.
Troubled real estate asset rate - noncurrent real estate loans plus other real estate owned as a percent of total real estate loans and other real estate owned.

## REGIONS

Northeast - Connecticut, Delaware, District of Columbia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Puerto Rico, Rhode Island, Vermont, U.S. Virgin Islands
Southeast - Alabama, Florida, Georgia, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, West Virginia
Central - Illinois, Indiana, Kentucky, Michigan, Óhio, Wisconsin

Midwest - Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota
Southwest - Arkansas, Louisiana, New Mexico, Oklahoma, Texas
West - Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, Oregon, Pacific Islands, Utah, Washington, Wyoming
